The Developer division plays a great role in the company service delivery. The team has been involved in several implementation and support contracts with great success. The resources have vast experience and through this are able to provide innovative solutions ensuring optimal use is made of your ERP implementation.

At some clients savings realized from quick wins were more than consulting fees would have been for a full year. The developer team ensures that you get great return on investment and efficiency for your ERP application.

Some of the “typical” deliverables include:

- Automation of payments, collection and reconciliation (AP, Payroll, AR, CE) . Banking products from ABSA, FNB, Nedcor as well as Standard Bank have been integrated with and is supported
- Auditing and reporting on bank account changes
- Communication with external parties using e-mail and faxing solutions
- Oracle open interfaces, API’s, customizations and business process automation
